

To open anaconda navigator:

- **Mac:** You'll find *Anaconda Navigator* in Launchpad (and also in the *Applications* folder). Drag it to the Dock if you want to have it readily available.
- **Windows:** You'll find *Anaconda Navigator* in the Start menu.
- **Linux:** Open a terminal window and run the command `anaconda-navigator`.

Launch Jupyter Notebook by clicking on Launch

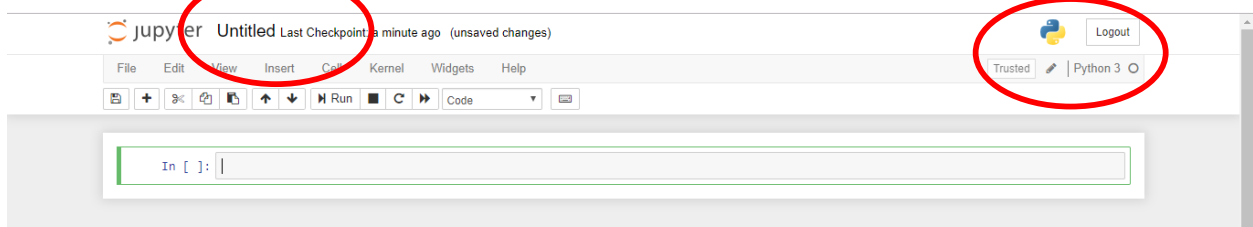

Will be presented with a Jupyter notebook in your browser (firefox/crome etc.)

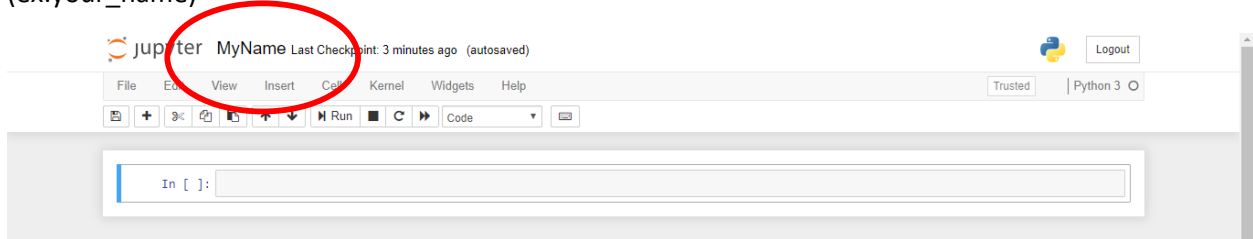

Click on New and select Python3

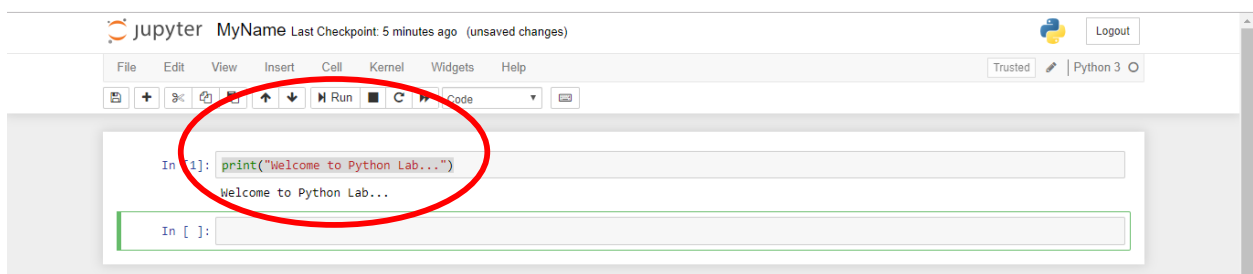

You will get Jupyter notebook linked to Python3

Now change name of your notebook by clicking on Untitled and renaming it with your name (ex:your_name)

Now lets run your first code:

Type your code and click **Run**.

Enjoy Coding.... 😊
